

“Bridging the Past and Present Toward the Future”

Japan Atomic Industrial Forum (JAIF) holds the “JAIF Annual Conference” each spring, the flagship event for nuclear industry that attracts some 1000 nuclear experts and leaders from all over the world. The conference provides a great opportunity for sharing key matters affecting the development and use of energy and nuclear power, and offers a networking platform for participants.

The occasion of the milestone 50th conference also offers a special opportunity for participants to look back on 50 years of nuclear history, see the current issues more clearly, explore their hopes and expectations, and anticipate the future.

April 11 (Tue.)
