

# ALPS treated water

In the latest report published by the IAEA, it reaffirmed that the discharge of ALPS treated water is consistent with relevant international safety standards.

IAEA report (July 18, 2024)

The total volume of the discharge:  
**62,631m<sup>3</sup> for 8 batches**

The total volume of tritium discharged:  
**approx. 10.2 trillion Bq**

The tritium concentration in discharged ALPS treated water:  
**Max. 276Bq/L**

Note : The numbers above are as of August 25, 2024.  
**Max. 276Bq/L is far below the WHO standards** for drinking water of 10,000Bq/L.

# FUEL DEBRIS

The fuel debris trial retrieval work from Unit 2 reactor is underway.

Fuel debris Retrieval marks the beginning of Phase 3.
